Example: Greek Text, Scholia II

In this example, we show how scholia, or other short texts, can be edited using the XeLaTeX and the `reledmac` package with unicode Greek input, such that the apparatus appears as a collection of footnotes below each individual scholium. In order to compile this file, you will need to have the Latin Modern Roman, Gentium Pro and Courier fonts installed on your computer.[1]

Sch. **2**

πολλάκις ἐν ταῖς κατὰ σύνθεσιν πτώσεσιν παράλληλος γίνεται ἡ ΒΓ τῇ ΔΑ· διὸ τότε αὐτόθεν δίδοται ἡ ΒΑ περιφέρεια, διὰ τὸ δοθείσης τῆς ὑπὸ ΖΔΒ δίδοσθαι καὶ τὴν λείπουσαν εἰς τὴν μίαν ὀρθήν, τουτέστι τὴν ὑπὸ ΒΔΑ· δίδοται ἄρα καὶ ἥ τε ΒΑ καὶ ὅλη ἡ ΓΒΑ.

Note, for example, that we can locally change the modulus for line numbers, if there are very few lines.

[Some text…]

We can then have another scholium at some later point in the text. Notice that the scholia can bridge a page-break.

Notice that we can place labels in the text and then refer to them by page and line number. For example, there are two occurrences of ὑπὸ in Sch. **2** (see p. 1, Sch. **2**, ll. 2 and 3).
